Uppsala

Summary

Backend-focused Full Stack Developer with 6+ years of experience building reliable, scalable systems using Ruby on Rails, Python (Flask), SQL databases, and modern frontend tools. Strong background in system integration, API design, and data modelling. Skilled in transforming requirements into clean, maintainable backend solutions that support real product needs. Currently strengthening skills in Node, React and TypeScript through personal projects. Passionate about performance, clarity, and building user-focused functionality.

Professional Experience

Plick

Full Stack Developer | August 2022 – Present

- Designed and built scalable backend solutions for a high-traffic e-commerce platform.
- Managed integrations between internal systems and external services, including requirement analysis and API design.
- Improved database performance and system stability through careful indexing, schema improvements and query optimisation.
- Worked closely with product owners, designers, and developers to build reliable features in an agile environment.
- Contributed to CI/CD workflows with GitHub Actions and Docker.
- Led the development of an AI-assisted upload feature that cut upload time by half and increased first-time user engagement.

Independent Consultant

IT Consultant | January 2025 – Present

- Manage full development lifecycle for client projects—requirements, architecture, implementation, and optimization
- Built a social mobile game from scratch, handling everything from technical decisions to launch

Ductus

Full Stack Developer | August 2019 – August 2022

- Developed and maintained an IP address management (IPAM) system for a major telecom client.
 - Designed REST APIs using Python (Flask) and created robust technical documentation.
 - Optimised database structures and data flows to reduce response times and improve reliability.
 - Handled production support, troubleshooting, migrations, and system refinement.
 - Collaborated closely with the client on requirements and testing.
 - Mentored a junior developer in backend practices and architecture.
-

Technical Skills

Languages: TypeScript (learning), JavaScript, Ruby, Python, Dart, SQL — adaptable to new languages and frameworks.

Backend: Node (learning), Ruby on Rails, Python (Flask), REST API design, system architecture, integrations, background jobs

Frontend: React (learning), Flutter, Turbo, WebSockets

Databases: PostgreSQL, MySQL, NoSQL, schema design, migrations, indexing, performance optimisation

Testing: Unit, integration, and system testing; experience with automated test frameworks across multiple stacks

DevOps & Tools: Docker, Git/GitHub, CI/CD (GitHub Actions), Linux environments, basic cloud exposure (AWS)

System Integration: API documentation (Swagger/OpenAPI), external service integration, data flow modelling

Other: performance tuning, technical documentation, Agile workflows, cross-functional collaboration

Languages

Swedish: Native

English: Fluent

Education

M.Sc. Information Technology (Software Engineering)

Uppsala University | 2014 – 2019
